Office Action Summary

Art Unit: 1774

1. The election requirement of Paper No. 5 is adhered to and made Final for the reasons of record.

2. Claim 1 is rejected under 35 USC 102(b) as being anticipated by any of the patents to Suzuki et al. (U.S.P. 4,784,905), Kuehrle (U.S.P. 4,792,860) or Hsieh (U.S.P. 5,817,264).

These patents all teach thermal transfer sheets which employ an image information layer which can contain applicants' preferred Permanent Yellow organic pigment.

3. Claims 1, 4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over any of the patents to Suzuki et al., Kuehrle or Hsieh.

The experimental modification of the prior art in order to ascertain optimum operating conditions (e.g., determine the pigment/binder ratio and the thickness of the image formation layer) fails to render applicants' claims patentable in the absence of unexpected results.

4. Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Yamaguchi et al. (U.S.P 5,716,477).

Yamaguchi et al. teach that in the art of thermal transfer sheets, the heat resistance of the image formation layer is a result-effective parameter (see column 2, lines 37 and 38). The experimental modification of this prior art in order to ascertain optimum operating conditions (e.g., determine the heat resistance of the image formation layer) fails to render applicants' claims patentable in the absence of unexpected results.

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over any of the patents to Suzuki et al., Kuehrle or Hsieh in view of either of applicants' statement of the prior art or the patent to Shinji (Jp 09169165).

Art Unit: 1774

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Yamaguchi et al. in view of either applicants' statement of the prior art or the patent to Shinji.

The primary references apply as per the preceding paragraphs. The secondary references teach the advantages (e.g., better and more light-heat conversion layer on thermal transfer sheets. Consequently, use of light-heat conversion layers for their concomitant function on the thermal transfer sheets of the primary references would have been obvious to one of ordinary skill in this art in the absence of unexpected results.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bruce Hess whose telephone number is (703) 308-2402. The examiner can normally be reached on Monday to Friday 9 Am to 5 PM.
